REC\_Python\_Week 6\_CY

Attempt : 1 Total Mark : 40 Marks Obtained : 40

Section 1: Coding

#### 1. Problem Statement

Alice is developing a program called "Name Sorter" that helps users organize and sort names alphabetically.

The program takes names as input from the user, saves them in a file, and then displays the names in sorted order.

File Name: sorted\_names.txt.

### **Input Format**

The input consists of multiple lines, each containing a name represented as a string.

To end the input and proceed with sorting, the user can enter 'q'.

The output displays the names in alphabetical order, each name on a new line.

Refer to the sample output for the formatting specifications.

```
Sample Test Case
```

```
Input: Alice Smith
    John Doe
    Emma Johnson
    Output: Alice Smith
Emma Johnson
John Da
    Answer
    def main():
      filename = "sorted_names.txt"
      names = []
      while(True):
        name = input()
        if name.lower() == 'q':

    break

          names.append(name)
      names.sort()
      with open(filename,'w') as file:
        for name in names:
          file.write(name + '\n')
      for name in names:
        print(name)
    if __name__ == "__main__":
      main()
```

Marks: 10/10 Status: Correct

### 2. Problem Statement

In the enchanted realm of Academia, you, the Academic Alchemist, are bestowed with a magical quill and a parchment to weave the grades of aspiring students into a tapestry of academic brilliance.

The mission is to craft a Python program that empowers faculty members to enter student grades for any two subjects, stores these magical grades in a mystical file, and then, with a wave of your virtual wand, calculates the GPA to unveil the true essence of academic achievement.

### **Input Format**

The input format is a string representing the student's name, any two subjects, and corresponding grades.

After entering grades, they can type 'done' when prompted for the student's name.

#### **Output Format**

The output should display the (average of grades) calculated GPA with a precision of two decimal places.

The magical grades will be saved in a mystical file named "magical\_grades.txt".

Refer to the sample output for format specifications

### Sample Test Case

Input: Alice

Math

95

**English** 

88

done

Output: 91.50

#### Answer

def main():

```
filename = "magical_grades.txt"
  student_name = input().strip()
  grades = []
  with open(filename,"a") as file:
    while(True):
       try:
         subject = input().strip()
         if subject.islower() == "done":
           break
         grade = int(input().strip())
         grades.append(grade)
         file.write(f"{student_name},{subject},{grade}\n")
       except EOFError:
         break
  gpa = sum(grades) / len(grades)
  print(f"{gpa:.2f}")
if __name__ == "__main__":
  main()
```

Status: Correct Marks: 10/10

### 3. Problem Statement

Implement a program that checks whether a set of three input values can form the sides of a valid triangle. The program defines a function is\_valid\_triangle that takes three side lengths as arguments and raises a ValueError if any side length is not a positive value. It then checks whether the sum of any two sides is greater than the third side to determine the validity of the triangle.

### Input Format

The first line of input consists of an integer A, representing side1.

The second line of input consists of an integer B, representing side2.

The third line of input consists of an integer C, representing side3.

### **Output Format**

The output prints either "It's a valid triangle" if the input side lengths form a valid triangle,

or "It's not a valid triangle" if they do not.

If there is a ValueError, it should print "ValueError: <error\_message>".

Refer to the sample output for the formatting specifications.

```
Sample Test Case
```

```
Input: 3
4
Output: It's a valid triangle
Answer
def is_valid_triangle(a,b,c):
  try:
    if a<=0 or b<=0 or c<=0:
      raise ValueError("ValueError: Side lengths must be positive")
    elif(b+c>a and a+c>b and a+b>c):
       print("It's a valid triangle")
     else:
       print("It's not a valid triangle")
  except ValueError as ve:
    print(ve)
a = int(input())
b = int(input())
c = int(input())
is_valid_triangle(a,b,c)
```

Status: Correct Marks: 10/10

### 4. Problem Statement

Alex is creating an account and needs to set up a password. The program prompts Alex to enter their name, mobile number, chosen username, and desired password. Password validation criteria include:

Length between 10 and 20 characters.At least one digit.At least one special character from !@#\$%^&\* set. Display "Valid Password" if criteria are met; otherwise, raise an exception with an appropriate error message.

### **Input Format**

The first line of the input consists of the name as a string.

The second line of the input consists of the mobile number as a string.

The third line of the input consists of the username as a string.

The fourth line of the input consists of the password as a string.

### **Output Format**

If the password is valid (meets all the criteria), it will print "Valid Password"

If the password is weak (fails any one or more criteria), it will print an error message accordingly.

Refer to the sample outputs for the formatting specifications.

### Sample Test Case

Input: John 9874563210 john john1#nhoj Output: Valid Password

#### **Answer**

def valid(p): if len(p) <10 or len(p) > 20:

```
return "Should be a minimum of 10 characters and a maximum of 20
                                                       240701
    characters"
      if not any(char.isdigit() for char in p):
         return "Should contain at least one digit"
      sp ={'!','@','#','$','%','^','&','*'}
      if not any(char in sp for char in p):
         return "It should contain at least one special character"
      return "Valid Password"
    a = input().strip()
    n = input().strip()
    u = input().strip()
p = input().strip()
    result = valid(p)
    print(result)
    Status: Correct
                                                                            Marks: 10/10
